¹The major fuels shown here represent most but not all energy resources consumed in Washington. Row totals will not equal the amount in the Total column. The Total column does not include non- energy uses of petroleum, such as lubricants, asphalt and road oil. Miscellaneous Petroleum includes aviation gas, kerosene, and heavy and light oils used at electric utilities. Electricity expenditures are those made by end users. Expenditures in major fuel types such as coal and natural gas include fuel used to generate electricity. Total expenditures include purchased electricity and exclude expenditures by electric utilities.

²Liquid petroleum gas.
